YAXELL
NY KNIV SLIBER

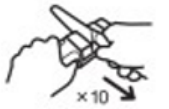

MATERIALS:

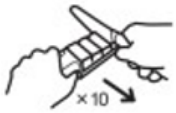

Body: ABS & Thermoplastic elastomers
Lid: Metha crylic resin
Grinding devices: Aluminum oxide, coarse 100, medium 180 and fine 320

1. Open the lid and pour some water into the compartment. Close the lid.

2. Take the knife and insert the edge to be sharpened into the groove Nr. 1 with the blade at 90 degrees. Using moderate pressure, pull the knife towards you until the stroke is completed. Repeat this process about ten times.

3. Repeat the process with the groove Nr.2.

4. Repeat the process with the groove Nr.3.

5. After sharpening, rinse the knife by hand using warm water.

6. Carefully dry the knife completely (blade edge up) with soft cloth.

Only light pressure should be applied to the knife during the sharpening process. Excessive pressure on the knife may cause damage to the wheels.
