You will need

- Merrychef Oven Cleaner
- Merrychef Oven Protector
- Protective rubber gloves
- Cleaning cloth or sponge
- Eye protection
- Heat proof gloves (optional)
- Dust mask (optional)

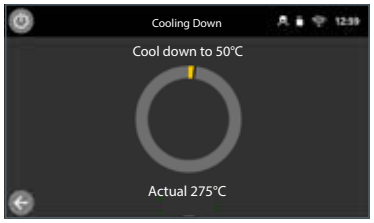

Cleaning your Merrychef oven when using an oven cavity liner

Cool down the oven

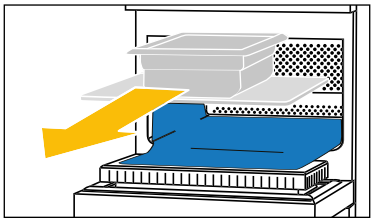

Cool down: This may just indicate a door open cool down process, if ice cool down is disabled in settings.

Do not leave the pan of water in the oven overnight

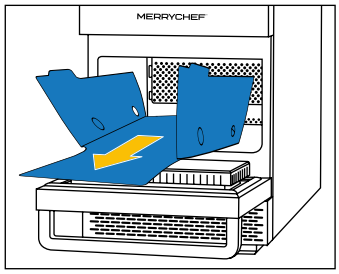

The cool down timing progress is displayed and takes approximately 20 mins.

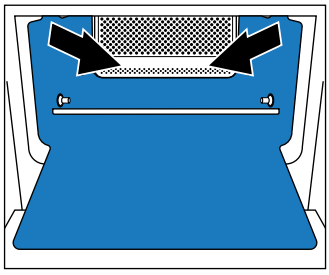

Remove the cool down pan and cook plate from the oven.

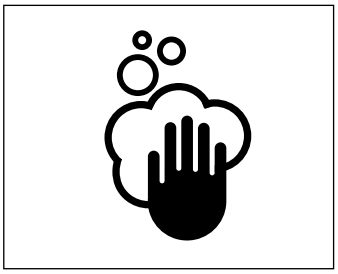

Clean the oven and cavity liner

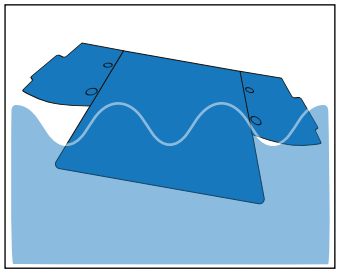

Remove oven cavity liner.

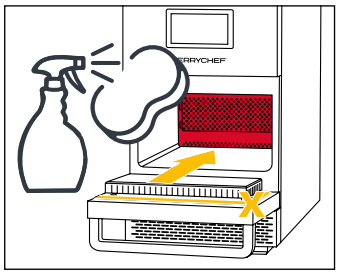

Slightly bend the oven cavity liner inwards to carefully detach the top side tabs then gently fold the side flaps inwards and pull the liner out of the oven.

Clean by hand with a sponge or cloth and neutral detergent.

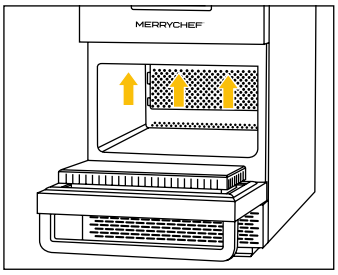

Rinse and dry. **Do not submerge in water for extended time**.

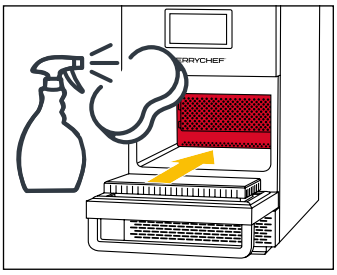

Apply Merrychef approved oven cleaner to the rear of the oven only, avoiding the door seals and roof of the cavity. Do not spray chemical directly into the oven.

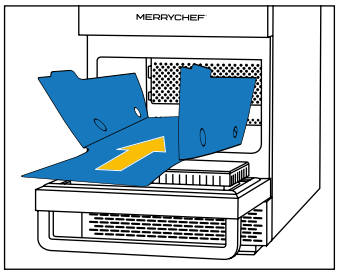

Clean the cook plate.

With a clean cloth, wipe the roof of the cavity. Do not use chemicals.

Apply Merrychef approved oven protector to the rear of the oven only, avoiding the door seals and roof of the cavity. Do not spray chemical directly into the oven.

Ensure oven cavity liner is dry prior to returning it to the oven.

IMPORTANT:

The oven cavity liner is suitable for a dishwasher but this may reduce product life.

Note: The product will stiffen when cool which is normal.
